

At Asepeyo Hospital, Sant Cugat del Vallés (Barcelona) April 2014

The rehabilitation department in Asepeyo Sant Cugat (Barcelona) has been using the Pharon Diatherm MEDISPORT from 2012.

We use it with in our treatments for a wide variety of injuries and we are very happy with the therapeutic results

We find it particularly useful in the few days after an acute injury and chronic rehabilitation phases, specially in soft and conjunctive tissues pathologies and deep tissues.

We have observed that the use of MEDISPORT Pharon Diatherm in our treatments reported some advantages over other treatments.

We consider the MEDISPORT Cryoultrasound to be an important piece of equipment in our Department.

We found MEDISPORT a good and efficient after sales and technical service.

Signed

Sr.Manel Torelló Vilar
